

Computing for Historians - Exercise 4

-
- Open the 'census.xls' workbook from the files saved to your H:drive.
 - Select data on men who are agricultural labourers using the filtering process shown in section 3. Open a new worksheet and copy and paste the selected data to create a table showing the names and ages of these male agricultural labourers.
 - Complete a frequency count table of the different ages of these men: Save your results in your H: drive folder, and compare with the demonstration at the end of the presentation for Section 4.
