

# Computing for Historians - Exercise 5

- 
- Open the 'exercise 4' worksheet in the 'France.xls' workbook. Set up a chart, using chart wizard to reflect the data on offences and offenders clearly.
  - NB: find a chart type that will allow you to show the total number of offences per category SUBDIVIDED into male and female offenders.
  - Save your results in your H: drive folder, and compare with the demonstration at the end of the presentation for Section 5.
  - As a further exercise in analysis, you may wish to think about some of the reasons for the differences in crimes between men and women: post your thoughts on your blog, if you have one.
